

Sediment Thickness Report Review for Port Everglades

ERDC Dredging Operations Technical Support Program (DOTS)

U.S. ARMY CORPS OF ENGINEERS

BUILDING STRONG®

Response Summary:

Performed review of a modeling report to predict deposition from sediment releases from dredging to deepen Port Everglades navigation channel. Recommended changes in the modeling approach and assumptions.

Period of Performance:

Start date: 25 February 2020 Completion Date: 9 March 2020

Benefits of the Response to the USACE Dredging/Navigation Program:

The modeling and analysis provided contributed to evaluations of impacts to neighboring coral beds and contributed to development of an adaptive management plan to reduce environmental impacts. The results will lead to a better and less costly project.

Deliverable:

The review comments were provided for input into Dr. Checks to facilitate tracking of comments, actions and responses.

Providing environmental and engineering technical support to the U.S. Army Corps of Engineers
Operations and Maintenance navigation and dredging missions
