

Dr. Robert D. Moser is a Research Civil Engineer in the Concrete and Materials Branch (CMB), Geotechnical and Structures Laboratory, U.S. Army Engineer Research and Development Center. In this position, he leads the Materials Diagnostics and Forensics Group of the CMB. He conducts research in a variety of areas focused on the development of new materials and material systems with the goal of improving the performance and durability of military and civil infrastructure systems. Robert is an active member of the American Concrete Institute (ACI), National Association of Corrosion Engineers (NACE), and American Ceramics Society (ACerS). Robert also serves in a joint appointment as an Adjunct Professor of Civil Engineering and Mechanical Engineering at Mississippi State University where he teaches courses on concrete materials science and infrastructure durability. He received his PhD degree in Civil Engineering from the Georgia Institute with a focus on improving the durability of prestressed concrete structures using high-strength corrosion-resistant materials.
