## **CORAGGIO MAGLIO**

### **Research Civil Engineer**

---

#### **BIOGRAPHY**

Mr. Coraggio Maglio is a Professional Engineer with 10 years of specialized experience in coastal processes, and freshwater and estuarine systems. He attained a Masters in Ocean Engineering from the Florida Institute of Technology as well as a Bachelors of Natural Sciences from New College of Florida.

Mr. Maglio was born and raised in Florida, and his hobbies include surfing and native landscaping. He is a strong sensible environmentalist and lover of nature, especially coastal areas. He incorporates a sense of practicality and balance in all his recommended engineering solutions.

In his current position at the USACE, Engineering Research and Development Center, Coastal and Hydraulics Laboratory he incorporates his knowledge and love of sensible sustainability into every project he manages, researches or advises on. The diversity of his work experience ranges from storm damage reduction projects, beach and ecosystem restoration, navigation dredging, and flood protection. His diverse and accomplished knowledge of physical and biological science, engineering and permitting processes, project management and construction techniques allows for improved practical inclusive resolutions.

He is recognized for his “out of the box” thinking and innovative approach to project solutions. Given his innovations as a design engineer and understanding of biological and physical processes, combined with, talented listening and communication skills, difficult and complex issues are efficiently resolved. His passion inspires those around him and promotes his teams to exceed expectations. As a result he is viewed as solution oriented and capable of the “fixing” sensitive and intricate problems.

Mr. Maglio and his wife and children, reside in Vicksburg, MS.
